Experience

Systems & Software (Harris Computer)

May 2021 – Current

Manager, Research and Development

Philadelphia, Pennsylvania (Remote)

- Managed team of seven engineers. Performing yearly performance reviews and working together to achieve personal goals and work on career development
- Collaborated with senior management to refine interview process for new groups of programmers being hired to work remotely. Led technical interviews and reviewed programming skills tests to filter candidates. Once candidates were hired, helped build new training material to get them up to speed in a short time frame.
- Implemented agile practices such as code review and scrum helping to lower QA failure rate for developers by 25% and increase code quality.
- Performed as Technical PM/Dev Lead for a project to add a new feature that was needed for a demo. Worked within tight timeline, organized work and made sure communication was flowing to meet goals on time.
- Consulted and developed on multiple integrations between product and other systems. Leading discussions between client, vendor, and team. Problem solving as issues arose.
- Reverse-engineered existing DevOps code to find places where alterations could be made to enhance the speed of deployments. Lowered deployment time by up to 50%. Refactored and documented code as this was completed.
- Developed interface for existing software processes to be refactored into Jakarta EE Batch Jobs. Created a RESTful API to start, stop and query the status of batch jobs. Allowing existing long-running synchronous web calls to be made asynchronous.

Systems & Software (Harris Computer)

July 2018 - May 2021

Software Engineer, Support

Winooski, Vermont

- Maintained Utility CIS software, working on full stack to fix bugs tracked in support tickets. Application stack including COBOL, Java, JavaScript, and Oracle.
- Managed multiple accounts from a support perspective. Met regularly with clients to ensure tickets were being handled appropriately and needs were being met.
- Performed Root Cause Analysis for critical system failure events. Reviewing logs, heap+thread dumps, and system monitoring data to discover causes behind issues and prevent future occurrences.
- Analyzed customer relationship for customer that was having issues after moving to a newer version of the software. Went through multiple months of tickets to call out common system bugs and issues that needed to be resolve. Also called out key people from the customer side and their pain points.

CSL Software Solutions

February 2017 - June 2018

Lead Application Developer

Burlington, Vermont

- Developed and maintained web applications for data entry and reporting. Used technologies such as ExtJS, DevExtreme, WCF, and SQL Server.
- Lead development of new multi-lingual offline web application for sales coaching. Worked to implement app with client teams in NA (US) and EU (UK, Belgium).
- Mentored other team members, guiding them through projects they were working on helping to maintain on time delivery.
